Residents will be assigned one session during each year of residency to spend at the Poison Control Center (PCC). This session will take place during their Continuity Clinic Module. Residents should report to the pharmacy in the basement of The Women’s and Children’s Hospital on their assigned day at the designated time.

The chief residents will send Dr. Joshi the resident schedule in advance to confirm that he will be present in the PCC on the scheduled day.

Residents will observe the operations of the PCC including the intake of calls to the center and the subsequent advisement/management of toxic exposures/ingestions.

Residents will attend lectures by Dr. Joshi and presentations given by other physicians and pharmacists-in-training.

Residents may participate in in-patient consultations for patients admitted with toxin exposures/ingestions.
